

Yukon's labour force decreased in February '09 (17,900) compared to February '08. Of the February 2009 labour force figure, 16,700 were employed and 1,200, or 6.7%, were unemployed. One year ago, in February 2008, there were 18,100 individuals in the labour force of whom 17,200 were employed and 900, or 5.0%, were unemployed.

February 2009 Employment at a glance:

• Labour force:	17,900
• Employed:	16,700
• Unemployed:	1,200
• Unemployment rate:	6.7%
-Last month	6.1%
-One year ago	5.0%

Figures From Across Canada—February 2009

	Number Employed	Number Unemployed	Unemployment Rate
Yukon	16,700	1,200	6.7%
Canada	16,899,400	1,415,900	7.7%
Newfoundland & Labrador	215,000	38,300	15.1%
P.E.I.	68,600	9,600	12.3%
Nova Scotia	456,400	44,000	8.8%
New Brunswick	365,300	35,400	8.8%
Quebec	3,840,100	329,200	7.9%
Ontario	6,558,900	626,700	8.7%
Manitoba	607,900	30,500	4.8%
Saskatchewan	522,500	25,800	4.7%
Alberta	2,002,100	114,500	5.4%
B.C.	2,262,700	161,700	6.7%

This table shows that Yukon is tied for fourth lowest in the country in terms of the unemployment rate (6.7%). Saskatchewan's unemployment rate (4.7%) was lowest, while Newfoundland's rate (15.1%) was highest.

Note: The NWT's unemployment rate of 3.2% and Nunavut's (10 largest communities) figure of 8.0% are available only as "unadjusted" estimates and are therefore not included in this table of seasonally adjusted data. Like the Yukon figures, they are also three-month moving averages and are therefore not included in the overall figure for Canada.

PLEASE NOTE: Due to rounding, the sum of individual Labour Force Survey characteristics at times does not equal the labour force and/or total employment figures. All figures quoted for the Yukon are three-month moving averages. For a definition of three-month moving average, please go to the list of definitions on page 12.

As of the January 2009 release, there were minor revisions made to all seasonally adjusted labour force characteristics from 2006 through 2008.

Yukon's Unemployment Rate

The unemployment rate remained relatively low over the past year. The following changes have occurred on a month-to-month basis:

	Percentage points*
2009 • January to February	0.6
2008 • Dec. '08 to Jan. '09	0.6
• November to December	0.6
• October to November	-0.1
• September to October	0.0
• August to September	-0.6
• July to August	0.6
• June to July	-0.1
• May to June	1.2
• April to May	0.0
• March to April	-0.6
• February to March	-0.5
• January to February	0.0

* percentage point is the actual numerical difference between two percentages, such as: 10% - 8% = 2 percentage points.

What is the unemployment rate, and how is it calculated?

The unemployment rate shows the relationship between the number of unemployed and the labour force. The labour force includes those individuals 15 years of age and older who are either employed or unemployed but looking for work. The higher the value of the unemployment rate, the greater the number of individuals unemployed as compared to the labour force.

The survey that estimates the Yukon's unemployment rate, the Labour Force Survey (LFS), has undergone survey redesign so comparable data is only available back to 1995.

Over the last 15 years the average unemployment rate for February has been 8.7%.

Looking at the change in the unemployment rate between January and February in previous years, the rate has risen 5 times, fallen 8 times and stayed the same twice since 1995.

	January	February	Change
2009	6.1%	6.7%	0.6%
2008	5.0%	5.0%	0.0%
2007	4.1%	3.0%	-1.1%
2006	4.5%	4.6%	0.1%
2005	6.0%	5.4%	-0.6%
2004	7.7%	6.5%	-1.2%
2003	10.2%	10.2%	0.0%
2002	9.5%	9.6%	0.1%
2001	13.1%	11.4%	-1.7%
2000	11.3%	11.2%	-0.1%
1999	13.9%	14.0%	0.1%
1998	10.6%	11.7%	1.1%
1997	14.1%	14.0%	-0.1%
1996	9.6%	9.0%	-0.6%
1995	8.2%	8.1%	-0.1%
Average 1995 to 2009	8.9%	8.7%	0.2%

Unemployment rates: Canada, Provinces and Territories — February 2009

*The unemployment rates for the Northwest Territories and Nunavut are NOT seasonally adjusted.

**Yukon's February Unemployment Rate
1995 to 2009**

Yukon's Employment - seasonally unadjusted figures

A word about "adjusted" vs. "unadjusted"

The statistics on the next 5 pages are "seasonally unadjusted," as opposed to the figures on pages 1 through 6, which are "seasonally adjusted."

"Seasonally adjusted" refers to the technique of adjusting the "raw" figures to remove seasonal movements (*see page 12 for further explanation*). As such, "seasonally adjusted" employment figures are widely used and quoted, as they are considered to be a more accurate picture of the current employment situation than the "raw" or "unadjusted" figures.

Some of the variables mentioned in the next 5 pages are available only in the "unadjusted" format, while others are available both as "adjusted" and "unadjusted." Comparisons between the "adjusted" and "unadjusted" series should not be made.

Yukon's Labour Force Characteristics (unadjusted)

		Labour Force		Unemployed	Not in Labour Force	Unemployment Rate	Participation Rate	Employment Rate

Where the numbers come from

Every month Statistics Canada surveyors in each province and territory of Canada interview a representative sample of individuals 15 years of age and older. The surveyors ask these individuals if they were working, or were looking and available for work, during the "reference week" (usually the 3rd week of the month). Individuals are counted as employed if:

- they worked for at least 1 hour during the reference week ("work" includes self-employment).

Individuals are counted as unemployed if:

- they were without work but had looked for work in the past 4 weeks;
- they had been laid off but were not looking for work because they expected to return to their original work;
- they were not looking for work because they had a new job starting within 4 weeks.

If someone is neither employed nor unemployed they are then defined as not in the labour force and therefore not counted in the unemployment rate. However, they are still considered to be part of the working-age population.

The survey described above is called the Labour Force Survey (LFS). The Yukon has been included in the LFS since January 1992. However, the national rates for Canada do not include any of the territories.

The objectives of the LFS are to divide the working-age population into three mutually exclusive classifications – employed, unemployed and not in the labour force – and to provide descriptive and explanatory data on each of these categories.

The LFS is the only source of monthly estimates of total employment including the self-employed, full- and part-time employment, and unemployment. It publishes monthly standard labour market indicators such as the unemployment rate, the employment rate and the participation rate.

In the Yukon, the LFS sample is designed to represent approximately 92% of the working-age population (Yukoners 15 years of age and older). Yukoners living in unorganized areas, full-time members of the armed forces and people living in institutions are not represented in the sample.

As a "household-based" survey, the LFS counts individuals as part of the labour force in the province or territory their home is in. Therefore, if an individual is working outside of the Yukon, in the NWT for instance, but still has their home in the Yukon, they are counted in the Yukon's labour force.

Suppression of Data For the Labour Force Survey in the Yukon, Statistics Canada suppresses any figure that is below 200 for confidentiality reasons, in order to ensure the confidentiality of each individual respondent to the survey. In turn, percentages (i.e. employment or unemployment rates) based on suppressed numbers will also be suppressed.

Definitions:

1. Employment

Employed persons are those who, during the reference week, did any work for pay or profit, or had a job and were absent from work.

2. Employment rate

Also referred to as "employment/population ratio," it is the number of employed persons expressed as a percentage of the population aged 15 years and over. The employment rate for a particular group (for example, women aged 25 years and over) is the number employed in that group expressed as a percentage of the population for that group.

3. Goods-Producing Industries

Goods-Producing Industries (or goods sector, or goods industries): includes agriculture, other primary industries (forestry; fishing and trapping; mines, quarries and oil wells), manufacturing, construction and utilities (electric power, gas and water).

4. Labour force

The labour force is the civilian non-institutional population 15 years of age and over who, during the survey reference week, were employed or unemployed.

5. Not in the labour force

Persons not in the labour force are those who, during the reference week, were unwilling or unable to offer or supply labour services under conditions existing in their labour markets; that is, they were neither employed nor unemployed.

6. Participation rate

The participation rate is the total labour force expressed as a percentage of the population aged 15 years and over. The participation rate for a particular group (for example, women aged 25 years and over) is the labour force in that group expressed as a percentage of the population for that group.

7. Reference Week

The reference week is the entire calendar week (from Sunday to Saturday) covered by the Labour Force Survey each month. It is usually the week containing the 15th day of the month. The interviews are conducted during the following week, called the Survey Week, and the labour force status determined is that of the reference week.

8. Seasonal adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those that are caused by regular annual events such as climate, holidays, vacation periods and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations.

9. Self-employed

There are two broad categories of workers: those who work for others and those who work for themselves, namely, the self-employed. The self-employed includes working owners of incorporated businesses, working owners of unincorporated businesses and other self-employed.

10. Service-Producing Industries

Service-Producing Industries (or service sector, or service industries): includes trade; transportation and warehousing; finance, insurance, real estate and leasing; professional, scientific and technical services; management, administrative and other support; educational services; health care and social assistance; information, culture and recreation; accommodation and food services; other services; and public administration.

11. Three-Month Moving Average

All monthly figures for the Territories, whether seasonally adjusted or unadjusted, are three-month moving averages – for example, the March 2008 unemployment rate of 4.5% is actually an average of the unemployment rates for the months of January, February and March. April's unemployment rate will become the average of the rates for February, March and April.

12. Unemployment

Unemployed persons are those who, during the reference week, were available for work and were either on temporary layoff, had looked for work in the past four weeks, or had a job to start within the next four weeks.

13. Unemployment rate

The unemployment rate is the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number unemployed in that group expressed as a percentage of the labour force for that group.
